D2 : WO 1996/013035 A

1. Novelty and Inventive Step

Claims 1-8 meet the criteria set out in PCT Article 33(2)-(3).

D1 discloses a method, an apparatus which reproduces digital moving picture data and audio data formed into packets and recorded as time division multiplexed bit streams, the bit streams being split in a self-complete manner. D2 relates to a recording medium, CD or a video CD, having a program reproducing sequences previously recorded thereon, and a reproducing apparatus and a reproducing method for reproducing video data or audio data from the recording medium.

With regard to Claims 1 and 6, neither D1 nor D2 teaches nor fairly suggests the invention's characteristic technique for playing an audio packet selectively from a video CD storing video and audio packets simultaneously.

Therefore, novelty and an inventive step can be acknowledged for the subject matter of Claims 1 and 6.

The other claims also comply with PCT Article 33(2) and (3) as they are dependent claims.

2. Industrial Applicability

Claims 1-8 meet the criteria set out in PCT Article 33(4). These claims are directed to a method, an apparatus and a medium for enabling a CD player or an MP3 player to extract to play an MPEG2 audio packet stored in a video CD selectively even if the video CD is inserted in the CD player or the MP3 player.
